The Hidden Tragedy of the Opioid Crisis

BY **CHRIS WILSON** OCTOBER 27, 2017

When President Trump declared the opioid crisis a public health emergency Thursday, he noted that "last year we lost at least 64,000 Americans to overdoses." He is not incorrect. A preliminary analysis for 2016 from the Centers for Disease Control and Prevention estimated the toll at 64,070, up from 52,898 in 2015.

What rarely gets mentioned in these staggering figures is that a significant number of opioid deaths are considered to be suicides. In 2015, 4,837 opioid-related fatalities were coded as "intentional self-poisoning" — 9% of all deaths. Another 2,553 were of undetermined cause, and 35 were assaults. All the others were considered accidents.

The real number of suicides may be higher. Experts says there are many challenges and inconsistencies when it comes to deciding if any drug-related fatality was intentional.

This is an example of popular source, an online article for the well-known news magazine, *Time*. The article, which explores a pattern in the statistics related to opioid deaths, is written by Chris Wilson. What are Chris Wilson's credentials?
